

Strictly Confidential: (For Internal and Restricted use only)

Senior Secondary School Term–II Examination, 2022

Marking Scheme: CHEMISTRY (Subject Code: 043)

[Paper Code: 56/3/3]

General Instructions: -

1. You are aware that evaluation is the most important process in the actual and correct assessment of the candidates. A small mistake in evaluation may lead to serious problems which may affect the future of the candidates, education system and teaching profession. To avoid mistakes, it is requested that before starting evaluation, you must read and understand the spot evaluation guidelines carefully.
2. **“Evaluation policy is a confidential policy as it is related to the confidentiality of the examinations conducted, Evaluation done and several other aspects. Its’ leakage to public in any manner could lead to derailment of the examination system and affect the life and future of millions of candidates. Sharing this policy/document to anyone, publishing in any magazine and printing in News Paper/Website etc may invite action under IPC.”**
3. Evaluation is to be done as per instructions provided in the Marking Scheme. It should not be done according to one’s own interpretation or any other consideration. Marking Scheme should be strictly adhered to and religiously followed. **However, while evaluating, answers which are based on latest information or knowledge and/or are innovative, they may be assessed for their correctness otherwise and marks be awarded to them. In class-X, while evaluating two competency-based questions, please try to understand given answer and even if reply is not from marking scheme but correct competency is enumerated by the candidate, marks should be awarded.**
4. The Head-Examiner must go through the first five answer books evaluated by each evaluator on the first day, to ensure that evaluation has been carried out as per the instructions given in the Marking Scheme. The remaining answer books meant for evaluation shall be given only after ensuring that there is no significant variation in the marking of individual evaluators.
5. Evaluators will mark(✓) wherever answer is correct. For wrong answer ‘X’ be marked. Evaluators will not put right kind of mark while evaluating which gives an impression that answer is correct and no marks are awarded. **This is most common mistake which evaluators are committing.**
6. If a question has parts, please award marks on the right-hand side for each part. Marks awarded for different parts of the question should then be totalled up and written in the left-hand margin and encircled. This may be followed strictly.
7. If a question does not have any parts, marks must be awarded in the left-hand margin and encircled. This may also be followed strictly.
8. If a student has attempted an extra question, answer of the question deserving more marks should be retained and the other answer scored out.
9. No marks to be deducted for the cumulative effect of an error. It should be penalized only once.
10. A full scale of marks 0-35 has to be used. Please do not hesitate to award full marks if the answer deserves it.
11. Every examiner has to necessarily do evaluation work for full working hours i.e., 8 hours every day and evaluate 30 answer books per day in main subjects and 35 answer books per day in other subjects (Details are given in Spot Guidelines). This is in view of the reduced syllabus and number of questions in question paper.
12. Ensure that you do not make the following common types of errors committed by the Examiner in the past:-
 - Leaving answer or part thereof unassessed in an answer book.

- Giving more marks for an answer than assigned to it.
 - Wrong totaling of marks awarded on a reply.
 - Wrong transfer of marks from the inside pages of the answer book to the title page.
 - Wrong question wise totaling on the title page.
 - Wrong totaling of marks of the two columns on the title page.
 - Wrong grand total.
 - Marks in words and figures not tallying.
 - Wrong transfer of marks from the answer book to online award list.
 - Answers marked as correct, but marks not awarded. (Ensure that the right tick mark is correctly and clearly indicated. It should merely be a line. Same is with the X for incorrect answer.)
 - Half or a part of answer marked correct and the rest as wrong, but no marks awarded.
13. While evaluating the answer books if the answer is found to be totally incorrect, it should be marked as cross (X) and awarded zero (0) Marks.
 14. Any unassessed portion, non-carrying over of marks to the title page, or totalling error detected by the candidate shall damage the prestige of all the personnel engaged in the evaluation work as also of the Board. Hence, in order to uphold the prestige of all concerned, it is again reiterated that the instructions be followed meticulously and judiciously.
 15. The Examiners should acquaint themselves with the guidelines given in the Guidelines for spot Evaluation before starting the actual evaluation.
 16. Every Examiner shall also ensure that all the answers are evaluated, marks carried over to the title page, correctly totalled and written in figures and words.
 17. The Board permits candidates to obtain photocopy of the Answer Book on request in an RTI application and also separately as a part of the re-evaluation process on payment of the processing charges.

MARKING SCHEME

Senior Secondary School Examination TERM–II, 2022

CHEMISTRY (Subject Code–043)

[Paper Code: 56/3/3]

Q. No.	EXPECTED ANSWER / VALUE POINTS	Marks
	SECTION—A	
1.	<p>(A) $\text{CH}_3\text{CH}_2\text{CONH}_2$</p> <p>(B) $\text{CH}_3\text{CH}_2\text{NH}_2$</p> <p>(C) $\text{CH}_3\text{CH}_2\text{NC}$</p> <p>(D) $\text{CH}_3\text{CH}_2\text{NH}-\text{S}(=\text{O})_2-\text{C}_6\text{H}_5$</p>	$\frac{1}{2} \times 4 = 2$
2.	<p>(i)  / 3-Hydroxy-3-phenylpropanal</p> <p>(ii)  / Benzaldehyde oxime</p> <p>(iii)  / Benzoate ion</p> <p style="text-align: right;">(Any two)</p>	$1 \times 2 = 2$
3.	$\Lambda_m = \frac{k}{C} \times 1000 \Omega^{-1} \text{ cm}^2 \text{ mol}^{-1}$ $= \frac{7.8 \times 10^{-5}}{0.001} \times 1000 \Omega^{-1} \text{ cm}^2 \text{ mol}^{-1}$ $= 78 \Omega^{-1} \text{ cm}^2 \text{ mol}^{-1} \text{ or } 78 \text{ S cm}^2 \text{ mol}^{-1}$ $\alpha = \frac{\Lambda_m}{\Lambda_m^\circ}$ $= \frac{78}{390} = 0.2$	$\frac{1}{2}$ $\frac{1}{2}$ $\frac{1}{2}$ $\frac{1}{2}$
	SECTION—B	
4.	<p>(i) Because of strong intermetallic bonding / strong interatomic interactions forces.</p> <p>(ii) Because of the presence of unpaired electrons in <i>d</i>-orbital / due to <i>d-d</i> transition.</p> <p>(iii) Because of much larger third ionization enthalpy of Mn / stable half-filled $3d^5$ configuration in Mn^{2+}.</p>	1×3

5.	(a)(i) $\text{F}-\text{CH}_2\text{COOH}$ (ii) $\text{CH}_3\text{CHO} < \text{CH}_3\text{CH}_2\text{OH} < \text{CH}_3\text{COOH}$ (iii) On warming with Tollens' reagent, benzaldehyde forms silver mirror whereas acetophenone does not. (Or any other suitable test)	1 1 1								
5.	OR (b) (i) Acetaldehyde (ii) Aqueous copper sulphate solution and alkaline solution of sodium-potassium tartarate (Rochelle's salt). (iii) $\text{CH}_3\text{CH}=\text{NNHCONH}_2$	1 1 1								
6.	(i) Because it gives a mixture of amines which is difficult to separate (ii) Aniline is a Lewis base and it reacts with AlCl_3 to form a salt / N of aniline acquires positive charge with AlCl_3 and hence is a deactivating group. (iii) Because of protonation of aniline / formation of anilinium ion which deactivates the ring	1×3								
7.	(a) (i) <div><div><div><div><div></div><div>CH_3</div></div><div><div>$\text{CH}_3-\text{C}-\text{CH}_3$</div><div>$\text{OH}$</div></div></div></div><div>/ 2-Methylpropan-2-ol</div></div> (ii) <div><div><div><div>CH_3</div><div>OC_2H_5</div></div><div><div>H</div><div>OC_2H_5</div></div></div></div> <div>/ Diethoxy ethane / Acetal of ethanal</div> (iii) $\text{HCOO}^- + \text{CH}_3\text{OH}$ / Methanoate and Methanol	1×3								
7.	OR (b) (i) <div><div><div><div>CH_3</div><div>C</div><div>CH_3</div></div><div>O</div></div></div> <div>/ Propanone</div> (ii) $\text{CH}_3\text{CH}_2\text{CH}_3$ / Propane (iii) <div><div><div></div></div></div> / Cyclohexane	1 x3								
8.	(a) (i) <table><tr><th>Adsorption</th><th>Absorption</th></tr><tr><td>The accumulation of molecular species at the surface rather than in the bulk of a solid or liquid.</td><td>The substance is uniformly distributed throughout the bulk of the solid.</td></tr></table> (ii) <table><tr><th>Lyophobic sol</th><th>Lyophilic sol</th></tr><tr><td>Solvent repelling</td><td>Solvent loving</td></tr></table>	Adsorption	Absorption	The accumulation of molecular species at the surface rather than in the bulk of a solid or liquid.	The substance is uniformly distributed throughout the bulk of the solid.	Lyophobic sol	Lyophilic sol	Solvent repelling	Solvent loving	1
Adsorption	Absorption									
The accumulation of molecular species at the surface rather than in the bulk of a solid or liquid.	The substance is uniformly distributed throughout the bulk of the solid.									
Lyophobic sol	Lyophilic sol									
Solvent repelling	Solvent loving									

	(iii) <table><tr><th>Multimolecular colloid</th><th>Macromolecular colloid</th></tr><tr><td>On dissolution, a large number of atoms or smaller molecules of a substance aggregate together to form species having size in the colloidal range.</td><td>When a colloid is formed by macromolecules in suitable solvents having size in the colloidal range.</td></tr></table> <p>(or any other suitable difference)</p>	Multimolecular colloid	Macromolecular colloid	On dissolution, a large number of atoms or smaller molecules of a substance aggregate together to form species having size in the colloidal range.	When a colloid is formed by macromolecules in suitable solvents having size in the colloidal range.	1
Multimolecular colloid	Macromolecular colloid					
On dissolution, a large number of atoms or smaller molecules of a substance aggregate together to form species having size in the colloidal range.	When a colloid is formed by macromolecules in suitable solvents having size in the colloidal range.					
8.	<p style="text-align: center;">OR</p> <p>(b) (I) (i) The potential difference between the fixed layer and the diffused layer of opposite charges is called zeta potential.</p> <p>(ii) The settling of colloidal particles / conversion of colloidal sol into precipitate.</p> <p>(II) Because of preferential adsorption of I^- ions on AgI colloid</p>	1 1 1				
9.	<p>* Metals which have incomplete d-orbital in ground state or in its oxidation state.</p> <p>*Because of completely filled d-orbitals in ground state or in its oxidation state.</p> <p>*Oxidation states differ by +1 unit in transition metals whereas by +2 units in p-block elements / heavier elements are stable in higher oxidation state in transition elements whereas heavier elements are stable in lower oxidation states in p-block elements.</p>	1 1 1				
10.	<p>(a) sp^3, diamagnetic</p> <p>(b) diamminechloridonitrito-N-platinum (II)</p> <p>(c) Because of chelate effect / due to cyclic structure.</p>	$\frac{1}{2}+\frac{1}{2}$ 1 1				
11.	<p>(a)</p> $\Delta_r G^\circ = -nFE_{cell}^\circ$ $= -2 \times 96500 \times 1.05 \text{ J mol}^{-1}$ $= -202,650 \text{ J mol}^{-1} \text{ Or } -202.65 \text{ kJ mol}^{-1}$ <p style="text-align: right;">(Deduct $\frac{1}{2}$ marks if no or incorrect unit)</p> $\log K_C = \frac{nE_{cell}^\circ}{0.059}$ $= \frac{2 \times 1.05}{0.059}$ $= 35.6$	$\frac{1}{2}$ 1 $\frac{1}{2}$ $\frac{1}{2}$				
11.	<p style="text-align: center;">OR</p> <p>(b)</p> $E_{cell} = E_{cell}^\circ - \frac{0.059}{2} \log \frac{[Fe^{2+}]}{[H^+]^2}$ $E_{cell} = 0.44 \text{ V} - \frac{0.059}{2} \log \frac{[0.001]}{[0.01]^2}$ $E_{cell} = 0.44 \text{ V} - \frac{0.059}{2} \log 10$ $E_{cell} = 0.44 \text{ V} - 0.0295 \text{ V} = 0.4105 \text{ V}$ <p style="text-align: right;">(Deduct $\frac{1}{2}$ marks if no or incorrect unit)</p>	1 1 1				

12.	<p>(a) The rate constant increases.</p> <p>(b) $2 + \frac{1}{2} = \frac{5}{2}$</p> <p>(c) Order is applicable for complex reaction whereas molecularity has no meaning for complex reaction.</p> <p>(d) $k = \frac{2.303}{t} \log \frac{[R]_0}{[R]}$</p> $t = \frac{2.303}{2 \times 10^{-3}} \log \frac{6}{2}$ $t = \frac{2.303}{2 \times 10^{-3}} \times 0.4771$ $t = 549.38 \text{ s}$ <p>(Deduct ½ mark for incorrect unit or no unit)</p>	<p>1</p> <p>1</p> <p>1</p> <p>½</p> <p>½</p> <p>1</p>
12.	<p style="text-align: center;">OR</p> $k = \frac{2.303}{t} \log \frac{[R]_0}{[R]}$ $t_{1/2} = \frac{0.693}{k}$ $k = \frac{0.693}{6930} \text{ year}^{-1} = 10^{-4} \text{ year}^{-1}$ $t = \frac{2.303}{10^{-4}} \log \frac{100}{75}$ $= \frac{2.303}{10^{-4}} [0.6021 - 0.4771]$ $t = 2878.75 \text{ years}$	<p>½</p> <p>½</p> <p>½</p> <p>½</p>
